Describe Personality, the Way It Is Measured, and the Factors that Shape It (3 of 4)

Personality Determinants

  - Personality appears to be a result of both influences.

- ***Heredity*** refers to those factors that were determined at conception.
  - The heredity approach argues that the ultimate explanation of an individual's personality is the molecular structure of the genes, located in the chromosomes.

Describe Personality, the Way It Is Measured, and the Factors that Shape It (4 of 4)

Early research tried to identify and 'label' enduring personality characteristics:

- Shy, aggressive, submissive, lazy, ambitious, loyal, and timid.
  - These are **personality traits.**

Strengths and Weakness of the MBTI and Big Five Model (1 of 6)
